GRADING METHODOLOGY

- A — Official/regulatory source with strong provenance (govt. gazette, accredited certificate).
- B — Accredited or certified authority (ISO 17025 lab, approved monitoring plan).
- C — Reputable institutional source (internal QA, reconciled ledger).
- D — Secondary or self-published material (supplier brochure without third-party check).
- E — Unstructured or low-provenance (email, unverified screenshot).
- A high grade assesses source integrity; it is not an independent verification result about accuracy.

G1 · Methodology Decisions

Topic	Decision Taken	Rejected Alternative	Rationale	Legal Basis	Status	Evidence
GOODS_EMISSIONS_ALLOCATION	Mass-based allocation per reconciled ledger	Entity-level allocation (e.g. TCE vs. goods)	Entity-level allocation is not required by the 2026 rules and is inconsistent with the mass-based approach in the 2025 guidance.	Regulation 2026, Chapter 2, Rule 2.1.1	Revised (2026)	2025/2026 Guidance, Annex A
SYSTEM_BOUNDARY	Boundary per monitoring plan (MP-JSP-2026-v3)	Entity-level boundary (e.g. Tata Group)	Entity-level boundary is not required by the 2026 rules and is inconsistent with the monitoring plan approach in the 2025 guidance.	Regulation 2026, Chapter 2, Rule 2.1.2	Revised (2026)	2025/2026 Guidance, Annex B

The operator declares that the recorded data reflects its records and that the evidence chain is complete to the best of its knowledge. This declaration is an operator record; it is not a verification opinion. The operator is responsible for the declared data, evidence and its record; the CBAMValid system is the automated preparation, sealing and reproduction tool; the accredited independent verifier performs the verification work and records its own opinion.

RETENTION & INTEGRITY VERIFICATION GUIDE

1. Keep the whole package unmodified until **2031-08-11**.
2. Verify manifest hash: compare Data Integrity Manifest.json entry with signed manifest record (A2).
3. Verify detached signature: run `node verify/cli.js --package <path> --strict`.
4. Compare file hashes: each component's SHA-256 in the manifest must equal the stored file hash.
5. If verification fails, the package has been altered. Do not use it as evidence; request a fresh sealed release.
